

# SMART HOMEOWNERS

**What is your security system worth and what does it consist of?**

**What does your \$1.41 per day monitoring actually pay for?**  
You receive Monitoring for Five Key Emergencies

**1x CONTROL PANEL: RRP - \$415.00**  
This is the brains of the security system. It communicates with ADT Monitoring Centre when there is an alarm situation.

**BURGLARY** - You simply turn on your alarm system each time you leave your home or office and switch it off again on your return. Should someone try to enter your home or office whilst the system is switched on, the alarm will be triggered and a signal will be sent to our monitoring centre for an emergency response. The alarm system can also be programmed to help provide protection for you while you are at home.

**1x CODE PAD: RRP - \$225.00**  
This is your control for the alarm system. It is usually mounted on the wall beside the main access point to our home. The code pad requires a user pass code to deactivate the alarm.

**24-HOUR MEDICAL** - In case of an accident or medical emergency where an ambulance is required, you only need to press the "Ambulance" button to activate the 24hr emergency response. This can help save precious time waiting to get through via 000 and also allowing you to attend to the injured whilst waiting for an ambulance to arrive.

**2x PASSIVE INFRA RED SENSORS: RRP - \$330.00**  
Installed to detect movement in particular areas of your home.

**24HR - HOUR POLICE EMERGENCY** - If you were to wake in the middle of the night to a strange sound from outside and see someone in your backyard, would you want to wait until they try to break in? Of course not! The 24-hour police Emergency channel allows you to activate an emergency response at the simple press of a button.

**1x INTERNAL SIREN (120 DECIBEL): RRP - \$90.00**  
The siren is around half the size of a standard drinking glass and is as loud as a car alarm. It is located inside the alarmed premises, usually mounted on the ceiling.

**HOSTAGE / DURESS** - Unfortunately one of the easiest ways for a burglar to get around a monitored alarm system is to force you to turn the system off. In this dramatic circumstance, what would you do? You probably want to turn the alarm system off and cooperate with their instructions. Your ADT monitored alarm system has an inbuilt duress feature should this ever happen. A silent signal will be sent from the alarm system, whilst you can still appear to have turned the system off.

**1x MODE SOCKET: RRP - \$200.00**  
This is connected to the phone line. It enables the control panel to communicate with the ADT Monitoring Centre when there is an alarm. This device will override any phone calls or Internet that may be current at the time of the alarm situation.

**1x EXTERNAL SIREN/ STROBE LIGHT: RRP- \$75.00**  
(Where applicable)

**VALUE OF YOUR PROMOTIONAL SECURITY SYSTEM \$1335.00**
